

3 Great Exercises to Help You Get the Perfect Behind

It's impossible to imagine a having a beautiful figure overall without the presence of a beautiful behind. The good news is that you don't need to go to the gym all the time to achieve this – you can manage it just as easily by doing a workout at home, provided it's the right one.

All you need for this however is a pair of dumb-bells (or heavy books), a yoga mat, and a strong enough desire for self-improvement.

This particular exercise scheme to get the perfect behind was developed by fitness trainer Angela Lee, who suggests that you should maintain it for thirty days.

Timetable:

The numbers in each box indicate the number of reps you should do for each day that the scheme lasts. You should do the workout in bursts lasting for 2-3 minutes, with a break of 1 minute imbetween. The workout should never take longer than about 11 minutes ever day. And don't ignore the days when you should be resting – your muscles need time to regain strength.

1. The basic exercise

This involves doing just ordinary squats. Place your feet shoulder-width apart, keep your back straight and bend your legs at the knee to form a sitting position low to the ground,

with your arms outstretched. The most important thing here is to find a good balance and place your body weight on both feet as a whole rather than any one part of them.

2. The exercise with dumb-bells

For this exercise you need to stand straight, with your legs placed slightly wider than shoulder-width apart and facing outward. Holding a dumb-bell in both hands and keeping your back and your arms straight, do the same squat into the sitting position as in the basic exercise. First use lighter ones, then gradually replace them with three- or four-kilogram ones. If you feel excessive tiredness after a few reps, slowly place the dumb-bells on the floor and use lighter ones.

3. The complex exercise

Stand up straight, with your legs placed slightly further apart than the width of your shoulders. Keeping your back straight and with your hands placed on the back of your head (and your fingers laced together), perform the squatting exercise. Make sure you that your feet are pointing out slightly and not directly lined up with your knees. Don't push against your neck with your hands, and don't lean your head forward. You should be able to feel that you are exercising the muscles in your back. You shouldn't be able to see your elbows in your peripheral vision.
